

SPRINT-4

Date	14 November 2022
Team ID	PNT2022TMID46387
Project Name	Personal Assistance for Seniors Who Are Self Reliant

TASK:-

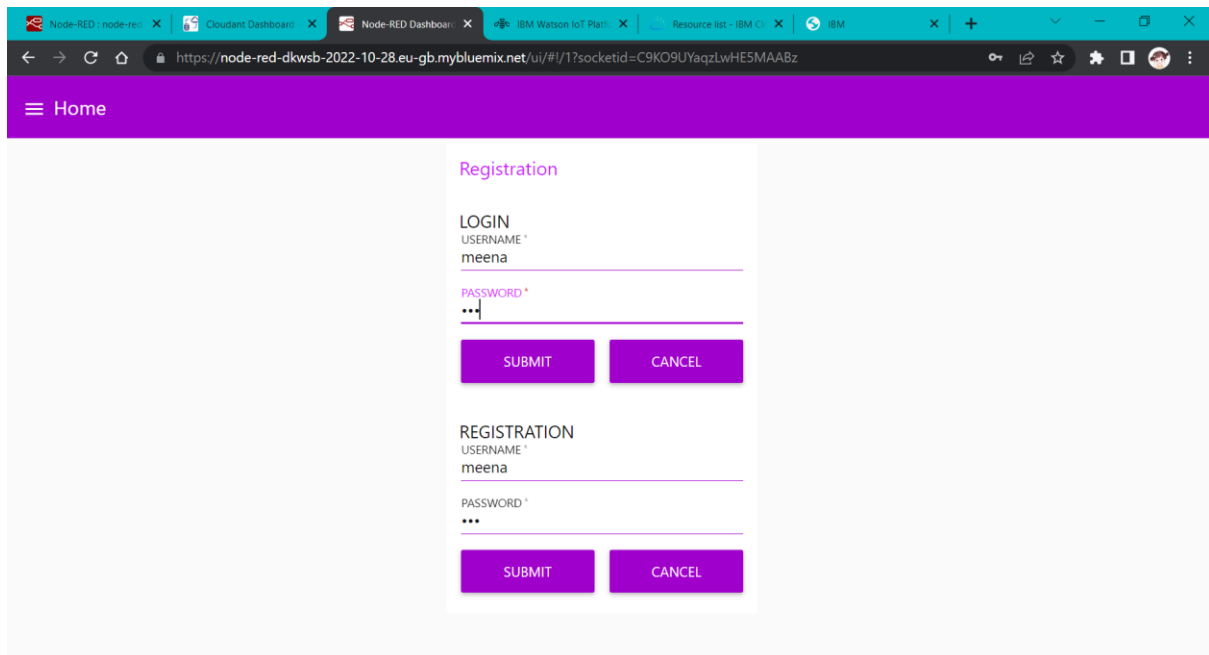

To create a Web UI, make the user interact with the software.

DESCRIPTION: -

- ❖ We have used **IoT Watson platform** for the creation of IoT device.
- ❖ The web application is built using **Node-RED** for collecting the medicine details from the users.
- ❖ We have used the **cloudant DB** for storing the collected data.
- ❖ The web application will send the medicine details to the created IoT device.
- ❖ The IoT device on receiving the details, it makes use of TTS to remind the user about the medicine.
- ❖ By using **TTS** (Text to Speech) service from the IBM platform, the medicinal information will be notified to the users in the form of voice commands.

Following are the screenshots that demonstrate the Web UI where user interact with the software.

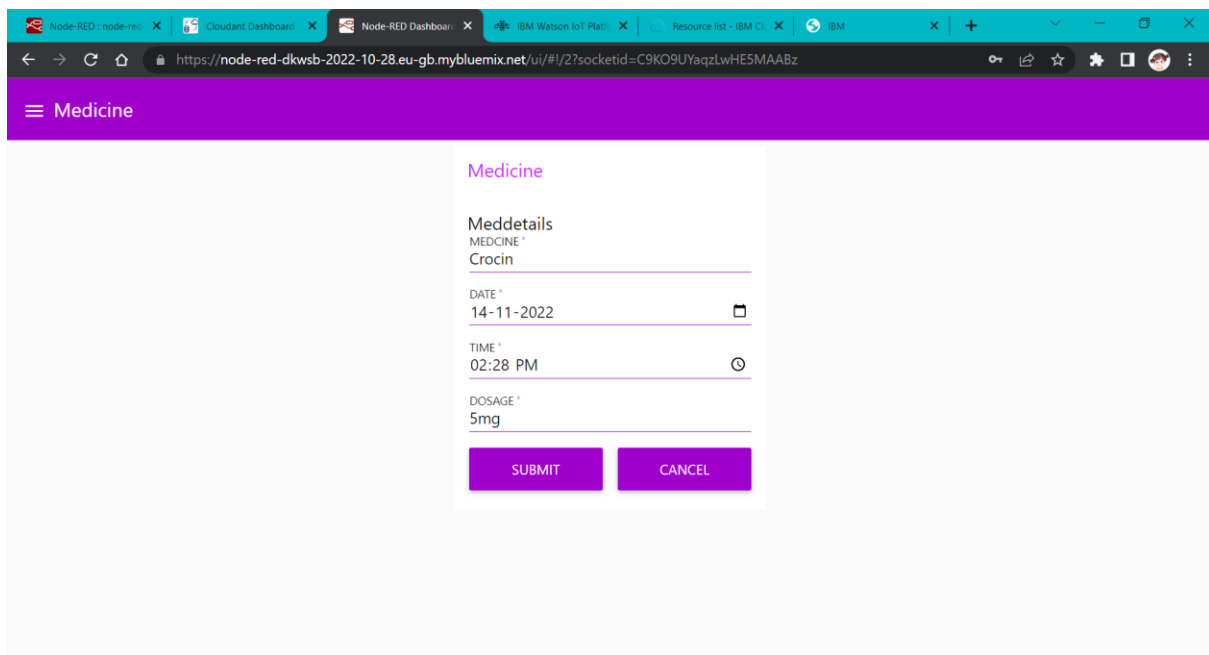

1)USER SIGNUP/LOGIN:

The screenshot shows a web browser window with the URL <https://node-red-dkwsb-2022-10-28.eu-gb.mybluemix.net/ui/#/1?socketid=C9KO9UYaqzLwHESMAABz>. The page has a purple header with a "Home" button. The main content area displays two forms: "Registration" and "Login". Both forms have fields for "USERNAME" (labeled "LOGIN" for the login form) and "PASSWORD". The "Login" form has a "SUBMIT" button and a "CANCEL" button. The "Registration" form also has a "SUBMIT" button and a "CANCEL" button.

- ❖ The user will first signup with username & password .
- ❖ Then using credentials, the user can login into the app.

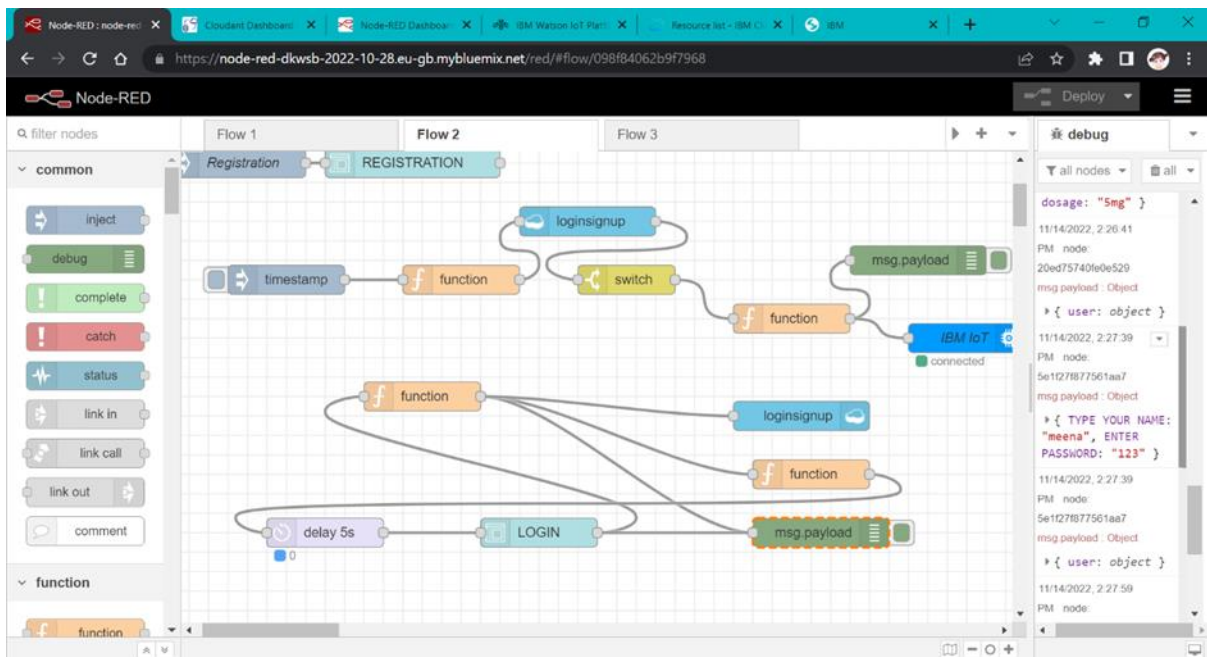

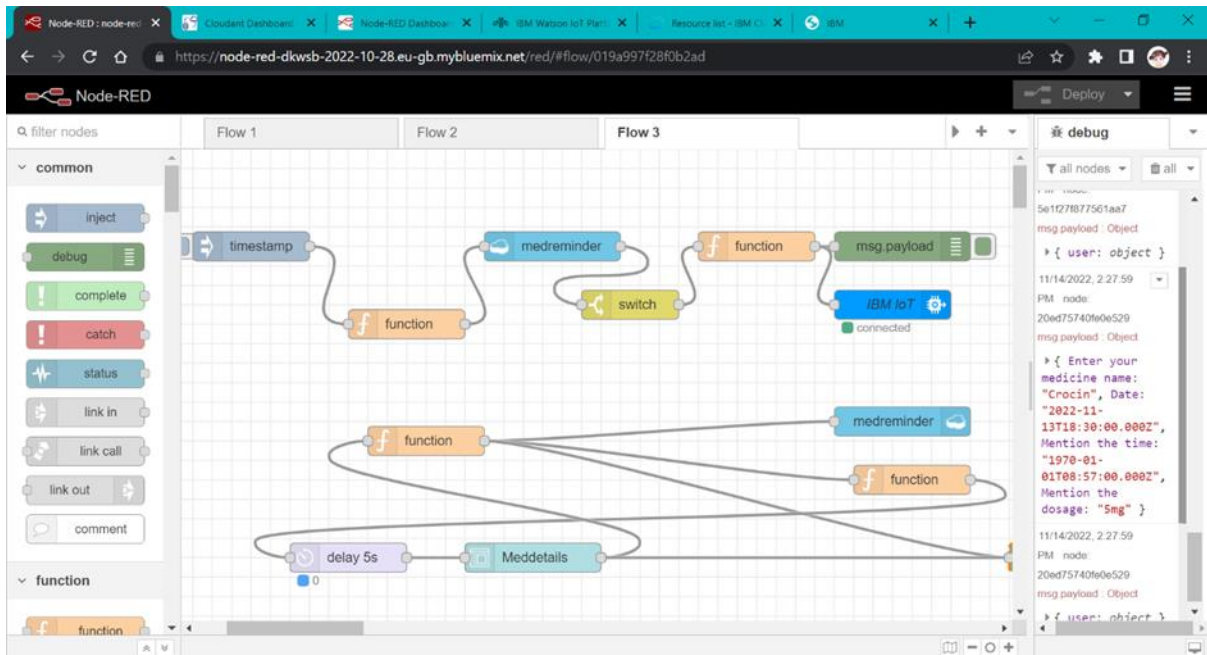

2)User- Medicine Details Form:

The screenshot shows a web browser window with the URL <https://node-red-dkwsb-2022-10-28.eu-gb.mybluemix.net/ui/#/2?socketid=C9KO9UYaqzLwHESMAABz>. The page has a purple header with a "Medicine" button. The main content area displays a form titled "Medicine" with a sub-header "Meddetails". The form has fields for "MEDICINE" (labeled "Crocin"), "DATE" (labeled "14-11-2022"), "TIME" (labeled "02:28 PM"), and "DOSAGE" (labeled "5mg"). There are "SUBMIT" and "CANCEL" buttons at the bottom of the form.

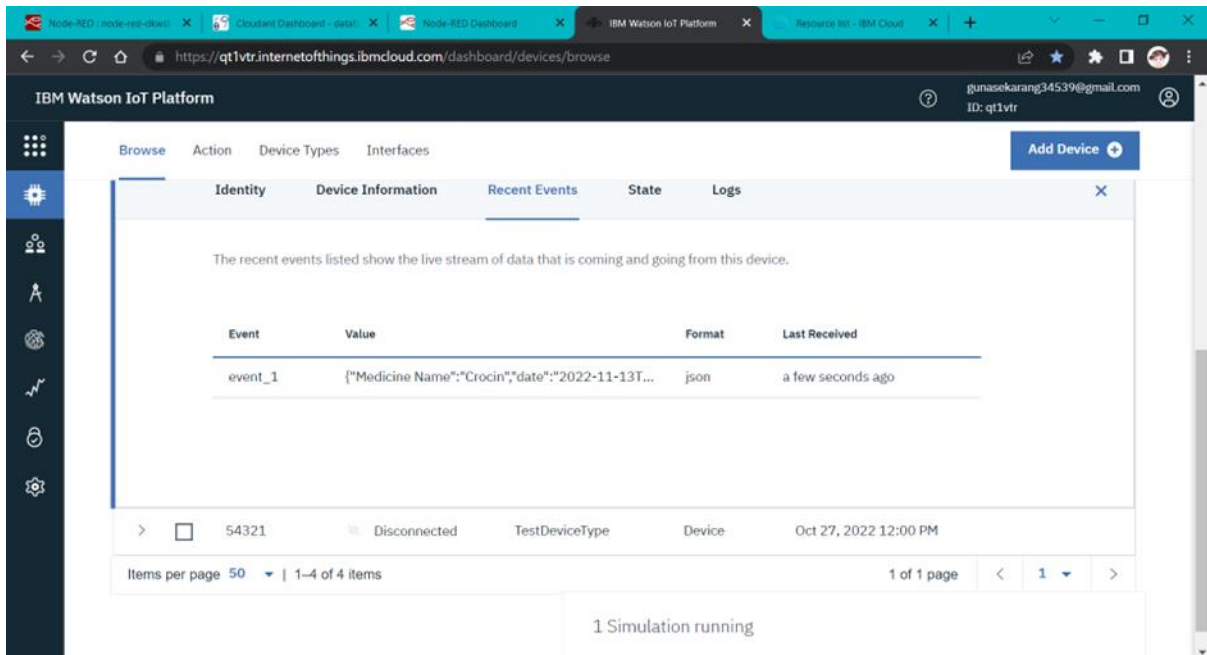

- ❖ Here, user will able to set the medicine alarm with medicine name, medicine dosage with date & time.

3) NODE-RED-WorkFlow:

- ❖ Using NodeRed flow editor, all the workflow of our webapp was designed .
- ❖ The above screenshots are the Node Red- flow of login/signup page and home screen of the web app.

4) IBM IOT DEVICE:

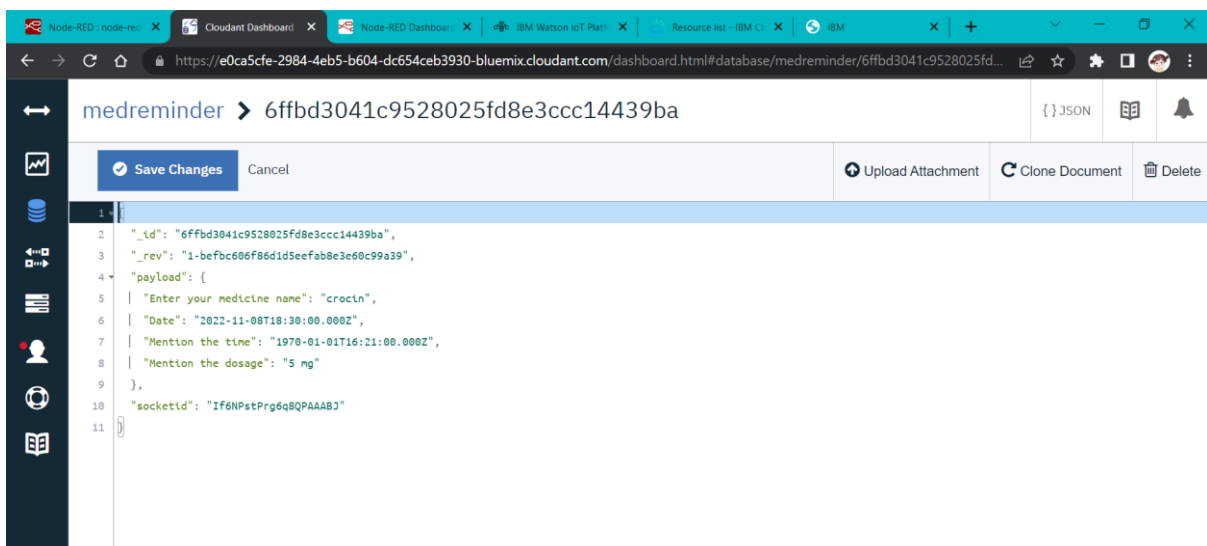

The screenshot shows the IBM Watson IoT Platform dashboard. The top navigation bar includes tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. The main content area displays the 'Recent Events' tab for a device. A table lists the recent events, showing a single event with the following details:

Event	Value	Format	Last Received
event_1	{"Medicine Name": "Crocin", "date": "2022-11-13T..."}	json	a few seconds ago

Below the table, there is a summary bar showing the device ID '54321', status 'Disconnected', type 'TestDeviceType', and a timestamp 'Oct 27, 2022 12:00 PM'. The bottom of the dashboard indicates '1 Simulation running'.

- ❖ The user details are fetched by IoT device named as “medreminder” which is created through IBM Watson Platform.

5) CLOUDANT-DB:

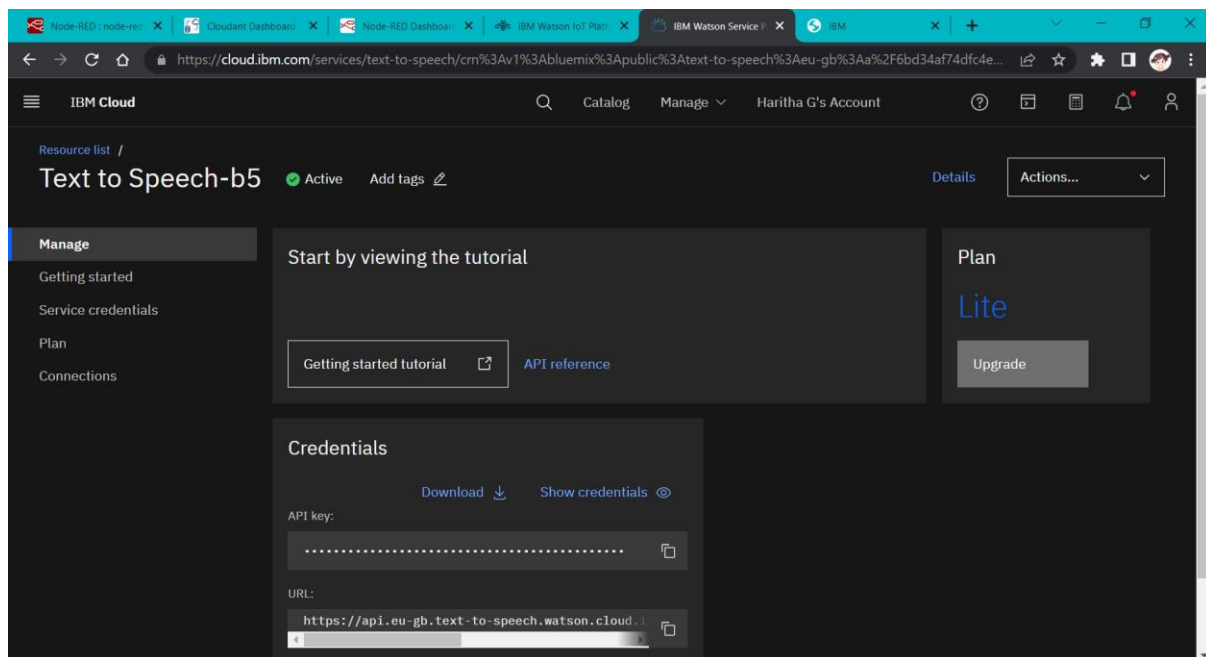

The screenshot shows the IBM Cloudant Database interface. The top navigation bar includes tabs for 'medreminder' and '6ffbd3041c9528025fd8e3ccc14439ba'. The main content area displays a JSON document with the following details:

```
{
  "_id": "6ffbd3041c9528025fd8e3ccc14439ba",
  "_rev": "1-befbc606f86d1d5eeFab8e3e60c99a39",
  "payload": {
    "Enter your medicine name": "crocin",
    "Date": "2022-11-08T18:30:00.000Z",
    "Mention the time": "1970-01-01T16:21:00.000Z",
    "Mention the dosage": "5 mg"
  },
  "socketId": "If6NPstPr6q8QPAAABJ"
}
```

The interface also includes a 'Save Changes' button and a 'Cancel' button. The bottom of the interface shows the document ID and a 'Delete' button.

- ❖ All the medicine details from the user are get stored in IBM Cloudant Database in a JSON Format under the Medreminder database.

6)TTS SERVICE:

- ❖ IBM TTS service is used to notify the user's medicine name and dosage via voice Commands

7)PYTHON FILE -TTS SERVICE:

```
ibmtts.py - C:\Users\Haritha Sharitha\Desktop\Naliyathiran\ibmtts.py (3.9.8)
File Edit Format Run Options Window Help
from ibm_watson import TextToSpeechV1
from ibm_cloud_sdk_core.authenticators import IAMAuthenticator
from playsound import playsound
authenticator = IAMAuthenticator('97f228C6Ec0YbfJrxCB7YW690uPadxJOjbuA0DBK8xFh')
text_to_speech = TextToSpeechV1(
    authenticator=authenticator
)

text_to_speech.set_service_url('https://api.eu-gb.text-to-speech.watson.cloud.ibm.com')

with open('med.mp3', 'wb') as audio_file:
    audio_file.write(
        text_to_speech.synthesize(
            'Take Crocin 50 mg Now',
            voice='en-US_AllisonV3Voice',
            accept='audio/wav'
        ).get_result().content
    )
print("playing")
playsound('med.mp3')
```

- ❖ This python file convert the text to speech using IBM TTS service .Using this ,Web application make an alert to the user via voice commands.

VOICE COMMANDS-TTS SERVICE:

- ❖ Above screenshot contain the voice command when user get notification about intaking of medicine which is given by the user via web application

RESULT:

Thus, By the end of the sprint-4, the Web UI where user interact with the software is successfully created and tested successfully.
